; TEST  114     BYTE 2-6 SHIFT CONTROL
;
; TEST DESCRIPTION
;       THIS TEST CHECKS THE SHIFTER SELECT LOGIC BY LOADING THE IB
;       WITH A DATA PATTERN, EXECUTING A FUNCTION, AND THEN CHECKING
;       THAT BYTES 2-6 RECEIVED THE CORRECT DATA. THE DATA PATTERNS
;       THAT ARE LOADED INTO THE IB ARE SELECTED TO CREATE SPECIFIC
;       CONDITIONS OF THE SIGNALS THAT GENERATE THE SHIFTER SELECTS.
;       EACH SUBTEST HEADER DESCRIBES THE EXPECTED STATE OF THESE SIGNALS.
;
;       SUBTST 1 - START FUNCTION AND THE CLR BYTE 0 FUNCTION
;       SUBTST 2 - BYTE 2-6 NO SHIFT WITH A CLR BYTE 1-5 CONDITIONAL
;                  FUNCTION AND SAVE ASCERTED.
;       SUBTST 3 - BYTE 2-6 GETS BYTES 3-7 WITH A CLR BYTE 1 FUNCTION
;       SUBTST 4 - BYTES 2-6 GET BYTES 3-7 WITH A CLR BYTES 1-5 CONDITIONAL
;                  FUNCTION AND "DELTA PC 1" DISABLED.
;       SUBTST 5 - BYTES 2-6 GET BYTES 3-7 WITH A CLR BYTES 1-5 CONDITIONAL
;                  FUNCTION WITH "DELTA PC 0" ENABLED.
;       SUBTST 6 - BYTES 2-6 GET BYTES 4-7 WITH A CLR BYTES 0,1 FUNCTION
;       SUBTST 7 - BYTES 2-6 GET BYTES 4-7 WITH A CLR BYTES 2,3 FUNCTION
;       SUBTST 8 - BYTES 2-6 GET BYTES 4-7 WITH A CLR BYTES 1-5 CONDITIONAL
;                  FUNCTION AND "DELTA PC 0,1, AND 2" ENABLED.
;       SUBTST 9 - BYTES 2-6 GET BYTES 4-7 WITH A CLR BYTES 1-5 CONDITIONAL
;                  FUNCTION AND "DELTA PC 0,1 AND PC 1 EN A" ENABLED.
;       SUBTST A - BYTES 2-6 GET BYTES 4-7 WITH A CLR BYTES 1-5 CONDITIONAL
;                  FUNCTION AND "DELTA PC 0,1 AND PC 1 EN B" ENABLED.
;       SUBTST B - BYTES 2-6 GET BYTES 6-7 WITH A CLR 0-3 FUNCTION.
;       SUBTST C - BYTES 2-6 GET BYTES 6-7 WITH A CLR BYTES 1-5 CONDITIONAL
;                  FUNCTION WITH "DELTA PC 0 AND 2" ENABLED.
;
; LOGIC DESCRIPTION
;       THIS TEST CHECKS THE LOGIC ON IDP THAT GENERATE THE DELTA PC
;       SIGNALS AND THE PC EN A &B SIGNALS, AND THE LOGIC THAT
;       GENERATES THE SHIFTER SELECT FOR BYTES 2 THRU 6.
;
; ERROR DESCRIPTION

.PAGE   "TEST 118       SHIFT MULTIPLEXOR DATA INTEGRITY"
;*********************************************************************
;++
; TEST  118     SHIFT MULTIPLEXOR DATA INTEGRITY
;
; TEST DESCRIPTION
;       THIS TEST CHECKS THE DATA INTEGRITY OF THE BYTE SHIFTERS. THIS IS
;       DONE BY TAKING AN 8 BYTE MEMORY PATTERN OF ALL ONES, WRITING A
;       BYTE OF ALL ZEROS INTO THIS PATTERN IN THE POSITION THAT WILL GET
;       SHIFTED INTO THE BYTE UNDER TEST, ALLOWING THE IB TO LOAD THE
;       PATTERN, EXECUTING THE SHIFT, AND THEN CHECKING THE BYTE UNDER
;       TEST TO ENSURE THE ZEROS WERE SHIFTED INTO IT.
;       THE TEST IS THEN REPEATED WITH THE COMPLIMENT PATTERN.
;
;       SUBTST 1 - BYTE 0 GETS BYTE 1
;       SUBTST 2 - BYTE 0 GETS BYTE 2
;       SUBTST 3 - BYTE 0 GETS BYTE 4
;       SUBTST 4 - BYTE 1 GETS BYTE 1
;       SUBTST 5 - BYTE 1 GETS BYTE 2
;       SUBTST 6 - BYTE 1 GETS BYTE 3
;       SUBTST 7 - BYTE 1 GETS BYTE 5
;       SUBTST 8 - BYTE 2 GETS BYTE 2
;       SUBTST 9 - BYTE 2 GETS BYTE 3
;       SUBTST A - BYTE 2 GETS BYTE 4
;       SUBTST B - BYTE 2 GETS BYTE 6
;       SUBTST C - BYTE 3 GETS BYTE 3

;       SUBTST 17- BYTE 5 GETS INVALIDATED
;       SUBTST 18- BYTE 6 GETS BYTE 6
;       SUBTST 19- BYTE 6 GETS BYTE 7
;       SUBTST 1A- BYTE 6 GETS INVALIDATED
;
; LOGIC DESCRIPTION
;       THIS TEST CHECKS THE DATA PATH BETWEEN THE BUFFER,
;       THE SHIFTER, THE INPUT MULTIPLEXOR, AND BACK TO THE BUFFER ON THE
;       IDP MODULE.
;
; ERROR DESCRIPTION
;       DATA: EXPECTED MICRO PC BITS <7:0>
;             RECEIVED MICRO PC BITS <7:0>
;       THE EXPECTED DATA WILL EITHER BE 8F, 83, OR 7E DEPENDING ON WHETHER
;       THE BYTE UNDER TEST IS ALL ZERO'S OR ALL ONE'S OR INVALID. IF A BIT IS DROPP
;       OR PICKED UP IN THE BYTE UNDER TEST, THE RECEIVED DATA COULD BE
;       ANYTHING.
;
; SYNC POINT DESCRIPTION

; TEST  11E     "A FORK" OP CODE DECODE
;
; TEST DESCRIPTION
;       THIS TEST CHECKS ALL THE INSTRUCTION ENTRY POINTS ON THE A FORK.
;       THIS IS DONE BY LOADING THE OPCODE INTO THE IB, EXECUTING THE
;       SUB/SPEC FUNCTION, AND CHECKING THE ADDRESS.
;       FOLLOWING IS A LIST OF THE OPCODES THAT ARE CHECKED AND THEIR EXPECTED
;       A FORK ADDRESS. THE MOVB'S AT THE END OF THE LIST ARE USED TO CHECK
;       THE SPECIFIER DECODE ADDRESSES.
;
;       INSTR   ADDRESS                         INSTR   ADDRESS
;       -----   -------                         -----   -------
;
;       HALT    8F                              NOP     8E
;       REI     8D                              BPT     8C
;       RET     8B                              RSB     8A

; TEST  122     "C FORK" OP CODE DECODES
;
; TEST DESCRIPTION
;       THIS TEST CHECKS ALL THE OPCODES THAT HAVE ENTRY POINTS ON THE
;       C FORK. THIS IS DONE BY LOADING THE IB WITH THE OPCODE, EXECUTING
;       TWO CLR BYTE 1'S, EXECUTING THE SUB/SPEC FUNCTION, AND CHECKING
;       THE ADDRESS.
;       FOLLOWING IS A TABLE OF THE OPCODES AND THE EXPECTED ADDRESSES
;       FOR THIS TEST:
;
;       INSTR   ADDRESS                 INSTR   ADDRESS
;       -----   -------                 -----   -------
;
;       CRC     C0                      PROBER  CE
;       INSQUE  CF                      REMQUE  01
;       ADDN6   CA                      SUBNC   C4
;       MULN    CB                      DIVN    CD
;       MOVTC   C3                      MOVTUC  C3
;       CVTNL   40                      EDITN   C6
;       ACBW    C4                      ADDF2   8E
;       MULF2   8F                      DIVF2   8D
;       ACBF    C5                      CMPF    C1
;       EMODF   C8                      POLYF   87
;       ADDD2   8A                      MULD2   8C
;       DIVD2   8B                      ACBD    84
;       CMPD    82                      EMODD   86
;       POLYD   85                      ASHL    4C

;*****************************************************************************
;++
; TEST  135     INSTRUCTION DEPENDENT SCRATCH PAD ADDRESSING
;
; TEST DESCRIPTION
;       THIS TEST CHECKS ALL THE POSSIBLE CONDITIONS THAT THE SCRATCH
;       PADS CAN BE ADDRESSED BY THE IB. EACH SUBTEST FLOATS A ONE THRU THE
;       SCRATCH PAD ADDRESS LINES BY LOADING SPECIFIERS INTO THE IB THAT HAVE
;       A REGISTER FIELD OF 0, 1, 2, 4, AND 8.
;       THE TEST STARTS BY LOADING ALL 16 OF THE RA AND RB SCRATCH PADS WITH
;       THE ADDRESS OF THEMSELVES. EACH SUBTEST THEN LOADS THE IB DATA,
;       LATCHES THE RA AND RB SCRATCH PADS, CHECKS LA, AND THEN CHECKS LB.
;
;       SUBTST 1 - RA AND RB ADDRESSED BY SPECIFIER 1
;       SUBTST 2 - RA AND RB ADDRESSED BY SPECIFIER 2
;       SUBTST 3 - RA AND RB ADDRESSED BY SPECIFIER 2 AND SPECIFIER 1 RESPECTIVELY.
;       SUBTST 4 - RA AND RB ADDRESSED BY THE PREVIOUS REGISTER NUMBER (PRN)
;       SUBTST 5 - RA AND RB ADDRESSED BY THE PRN PLUS 1. THIS SUBTEST
;                  CHECKS PRN'S OF 0, 1, 2, 4, 8, AND F TO ENSURE THAT
;                  THE ADDER IS WORKING CORRECTLY.
;       SUBTST 6 - RA AND RB ADDRESSED BY THE SP1 PLUS 1. THIS SUBTEST
;                  CHECKS SP1'S OF 0, 1, 2, 4, 8, AND F TO ENSURE THAT
;                  THE ADDER IS WORKING CORRECTLY.
;       SUBTST 7 - COMP MODE RA ADDRESSED BY SPECIFIER 1
;       SUBTST 8 - COMP MODE RA ADDRESSED BY SPECIFIER 2
;       SUBTST 9 - COMP MODE RA ADDRESSED BY PRN.OR.1. THIS SUBTEST
;                  CHECKS PRN'S OF 0, 1, 2, 4, 8, AND F TO ENSURE THAT
;                  COMP MODE DOES AN OR FUNCTION RATHER THAT AN ADD.
;
; LOGIC DESCRIPTION
;       THIS TEST CHECKS THE SPECIFIER 1 AND SPECIFIER 2 ADDRESS MULTIPLEXORS
;       IN VAX AND COMPATABILITY MODE, AND THE PRN LATCH
;       ON THE IDP MODULE, AND THE INSTRUCTION DEPENDENT INPUTS TO THE SCRATCH
;       PAD ADDRESS MULTIPLEXORS ON THE DAP MODULE.
;
; ERROR DESCRIPTION
;       DATA: EXPECTED SCRATCH PAD ADDRESS
;             RECEIVED SCRATCH PAD ADDRESS
;             LOOP COUNT -- DESCRIBES THE CONTENTS OF BYTES 1 AND 2 IN THE
;               INSTRUCTION BUFFER. (SEE THE DATA TABLE AT THE END OF THIS TEST)

; TEST  13F     INSTRUCTION DEPENDENT ALU ROM
;
; TEST DESCRIPTION
;       THIS TEST LOADS THE INSTRUCTION BUFFER WITH OPCODES AND PUTS DATA
;       ON THE ALEG AND BLEG OF THE ALU TO TEST EACH POSSIBLE FUNCTION OF
;       THE ALU IN INSTRUCTION DEPENDENT MODE. FOLLOWING IS A LIST OF THE
;       OPCODES, THE ALU FUNCTION, THE ALEG AND BLEG DATA, AND THE EXPECTED
;       ALU OUTPUT THAT IS USED IN THIS TEST.
;       THE ALEG, BLEG, AND EXPECTED ALU DATA ARE ALSO FETCHED FROM THE
;       CACHE.

; TEST  14C     CM INSTRUCTION DEPENDENT COND CODE LOAD
;
; TEST DESCRIPTION
;       THIS TEST CHECKS THOSE FUNCTONS OF THE CONDITION CODES THAT WERE
;       NOT TESTED IN PREVIOUS TESTS AND REQUIRE A UCCK FIELD OF 7.
;       THE INSTRUCTION BUFFER IS LOADED WITH SPECIFIC OP CODES TO GENERATE
;       THE APPROPRIATE ADDRESSES ON THE CONDITION CODE PROMS, AND TO SELECT
;       THE APPROPRIATE DATA TYPE.
;
;       SUBTST 1 - CHECK C SELECT = 2 WITH ALU.NE.0
;       SUBTST 2 - CHECK C SELECT = 2 WITH ALU=0
;       SUBTST 3 - CHECK C SELECT = 6 WITH AMX SIGN=0
;       SUBTST 4 - CHECK C SELECT = 6 WITH AMX SIGN.NE.0
;       SUBTST 5 - CHECK VSELECT=1 WITH ALU SIGN*-AMX SIGN
;       SUBTST 6 - CHECK VSELECT=1 WITH ALU SIGN*AMX SIGN
;       SUBTST 7 - CHECK VSELECT=1 WITH -ALU SIGN*-AMX SIGN
;       SUBTST 8 - CHECK VSELECT=2 WITH PSL V SET
;       SUBTST 9 - CHECK VSELECT=2 WITH PSL V CLEAR
;       SUBTST A - CHECK VSELECT=4 WITH -ALU SIGN*PSL C
;       SUBTST B - CHECK VSELECT=5 WITH V DETECT SW TRUE
;       SUBTST C - CHECK Z SELECT = 4
;       SUBTST D - CHECK N SELECT = 1 WITH -ALU SIGN*INV ALU SIGN
;       SUBTST E - CHECK N SELECT = 1 WITH ALU SIGN*INV ALU SIGN
;       SUBTST F - CHECK C SELECT = 7
;
; LOGIC DESCRIPTION
;       THIS TEST CHECKS PART OF THE CM INSTRUCTION DEPENDENT PROM, PART OF
;       THE CV AND ZN PROMS, AND PART OF THE LOGIC THAT FEEDS THE C, V,
;       Z, AND N DATA SIGNALS ON THE CEH MODULE.

;++
; TEST  157     CES REGISTER ARITHMETIC TRAP CODES (BITS<6:4>)
;
; TEST DESCRIPTION
;       THIS TEST CHECKS THE THREE BITS IN THE CES REGISTER THAT REPRESENT
;       THE ARITHMETIC TRAP CODES. SINCE TRAP CODE 0 IS A FUNCTION OF  THE V DATA
;       SIGNALS, THE INSTRUCTION BUFFER MUST BE LOADED WITH SPECIFIC OP CODES TO
;       GENERATE THE REQUIRED CONDITIONS OF THE V DATA SIGNALS.
;
;       SUBTST 1 - CHECK THAT THE BITS SET AND CLEAR CORRECTLY WHEN WRITTEN
;                  FROM THE ID BUS. ONLY 5 OF THE 8 POSSIBLE BIT PATTERNS
;                  ARE TESTED IN THIS SUBTEST. THESE 5 PATTERNS SET OR CLEAR
;                  THE TRAP CODES INDEPENDENTLY OF OTHER SIGNALS EXCEPT FOR THE
;                  PSL IV BIT, WHICH IS SET FOR THIS SUBTEST.
;       SUBTST 2 - CHECK THAT THE BITS SET WHEN ALL ONE'S ARE WRITTEN TO THEM.
;       SUBTST 3 - CHECK THAT TRAP CODE 0 DOES NOT SET WHEN THE CONDITION
;                  CODE LOAD IS NOT = 7.
;       SUBTST 4 - CHECK THAT TRAP CODE 0 DOES NOT SET WHEN THE PSL IV
;                  BIT IS CLEAR.
;       SUBTST 5 - CHECK THAT TRAP CODE 0 DOES NOT SET WHEN "ID TO TRAP
;                  CODE" IS TRUE.
;       SUBTST 6 - CHECK THAT TRAP CODE 0 DOES NOT SET WHEN GATES E50.8
;                  AND E51.8 ARE NOT ASSERTED.
;       SUBTST 7 - CHECK THAT TRAP CODE 0 DOES NOT SET WHEN 'EN IV TRAP"
;                  IS NOT ASSERTED.
;       SUBTST 8 - CHECK THAT TRAP CODE 0 SETS WHEN GATE E50.8 IS ASSERTED.
;       SUBTST 9 - CHECK THAT TRAP CODE 0 SETS WHEN GATE E51.8 IS ASSERTED.
;       SUBTST A - CHECK THAT TRAP CODE 0 SETS WHEN GATE E50.8 IS ASSERTED.
;       SUBTST B - CHECK THAT "ID TO TRAP CODE" IS FALSE WHEN THE PSL IV
;                  IS CLEAR AND ID BUS <6:4> IS = 1
;       SUBTST C - CHECK THAT "ID TO TRAP CODE" IS FALSE WHEN THE PSL DV
;                  BIT IS CLEAR AND ID BUS <6:4> IS  = 6
;       SUBTST D - CHECK THAT "ID TO TRAP CODE" IS TRUE WHEN THE PSL FU
;                  BIT IS SET AND ID BUS <6:4> IS = 5
;
; LOGIC DESCRIPTION
;       THIS TEST CHECKS THE LOGIC ON THE CEH MODULE THAT CONTROLS THE
;       SETTING AND CLEARING OF THE ARITHMETIC TRAP CODES.
;
; ERROR DESCRIPTION
;       DATA: EXPECTED ARITHMETIC TRAP CODE
;             RECEIVED ARITHMETIC TRAP CODE
;             LOOP COUNT FOR SUBTEST 1 ONLY -- INDICATES WHICH VALUE
;               OF ID BUS BITS<6:4> IS BEING USED, I.E.
;                 4= 1, 3= 2, 2= 3, AND 1= 4
;
; SYNC POINT DESCRIPTION
;       SUBTST 1 - SYNC06--LOAD THE TRAP CODES
;                  SYNC07--READ THE TRAP CODES
;                  SYNC08--CLEAR THE TRAP CODES WITH ID BUS BITS<6:4>=0
;       SUBTST 2 - SYNC09--SET THE TRAP CODES
;                  SYNC0A--READ THE TRAP CODES
;       SUBTST 3 - SYNC0B--CLOCK TRAP CODE 0

;++
; TEST  161     INTERVAL COUNTER
;
; TEST DESCRIPTION
;       THIS TEST CHECKS THE DATA INTEGRITY AND THE FUNCTIONALITY OF THE
;       INTERVAL COUNTER.
;
;       SUBTST 1 - FLOAT A ZERO THRU THE NEXT INTERVAL REGISTER, LOAD THE
;                  INTERVAL REGISTER USING THE "TRANSFER" BIT IN THE CONTROL
;                  AND STATUS REGISTER, AND READ AND CHECK THE INTERVAL REGISTER.
;       SUBTST 2 - SAME AS SUBTST 1 EXCEPT WITH A FLOATING 1 TEST PATTERN.
;       SUBTST 3 - CHECK THAT THE CARRY PROPAGATION ON THE INTERVAL REGISTER
;                  WORKS BY LOADING THE INTERVAL REGISTER WITH ALL ONES,
;                  STEPPING THE COUNTER, WITH THE SINGLE STEP BIT, AND
;                  CHECKING THAT THE INTERVAL REGISTER ROLLED OVER TO ZERO.
;       SUBTST 4 - CHECK THAT THE INTERRUPT ENABLE BIT IN THE CONTROL AND
;                  STATUS REGISTER CAN BE SET AND CLEARED.
;       SUBTST 5 - CHECK THE DIVIDE BY 5 COUNTER THAT CONTROLS THE INCREMENT
;                  OF THE INTERVAL REGISTER AND THE RUN BIT IN THE CONTROL
;                  AND STATUS REGISTER BY LOADING THE INTERVAL REGISTER
;                  WITH ZERO, STARTING THE COUNTER, WAITING 8 CYCLES FOR THE
;                  COUNTER TO INCREMENT TWICE, STOPPING THE COUNTER, AND
;                  CHECKING THAT THE INTERVAL REGISTER INCREMENTED TWICE
;                  AND THAT THE RUN BIT SET AND CLEARED.
;       SUBTST 6 - CHECK THE AUTO RELOAD FUNCTION AND THE INTERRUPT REQUEST
;                  BIT BY LOADING THE INTERVAL REGISTER WITH ALL ONES,
;                  LOADING THE NEXT INTERVAL REGISTER WITH 3F, STARTING THE
;                  COUNTER AND WAITING 3 CYCLES, STOPPING THE COUNTER AND
;                  CHECKING THE INTERVAL REGISTER FOR 3F AND THE INTERRUPT
;                  REQUEST BIT SHOULD BE SET. THEN THE INTERRUPT REQUEST BIT
;                  IS WRITTEN AS A ONE TO ENSURE IT CLEARS.
;       SUBTST 7 - CHECK THAT THE ERROR BIT SETS AND CLEARS CORRECTLY BY
;                  LOADING THE INTERVAL REGISTER WITH -2, STARTING THE COUNTER
;                  AND WAITING 17 CYCLES FOR RELOAD TO OCCUR TWICE,
;                  STOPPING THE COUNTER AND CHECKING THAT THE ERROR BIT SET.
;                  THE ERROR BIT IS THEN WRITTEN AS A ONE TO ENSURE IT CLEARS.
;
; LOGIC DESCRIPTION
;       THIS TEST CHECKS THE INTERVAL COUNTER LOGIC ON THE CEH AND ICL
;       MODULES. IT ALSO CHECKS THE ID BUS INTERFACE TO THE NEXT INTERVAL
;       AND INTERVAL REGISTERS.
;
; ERROR DESCRIPTION
;       DATA: EXPECTED REGISTER CONTENTS (THE REGISTER DEPENDS ON THE SUBTEST)
;             RECEIVED REGISTER CONTENTS
;             LOOP COUNT -- SUBTESTS 1,2, AND 4 ONLY.
;               INDICATES THE DATA PATTERN BEING LOADED INTO THE INTERVAL COUNTER.
;
; SYNC POINT DESCRIPTION
;       SUBTST 1 - SYNC26--NEXT INTERVAL REGISTER GETS LOADED
;                  SYNC27--INTERVAL REGISTER GETS LOADED
;                  SYNC28--INTERVAL REGISTER IS READ ON THE ID BUS
;       SUBTST 2 - SYNC29--NEXT INTERVAL REGISTER GETS LOADED
```

```
                                        ;2408   ;                 SYNC2A--INTERVAL REGISTER GETS LOADED
                                        ;2409   ;                 SYNC2B--INTERVAL REGISTER IS READ ON THE ID BUS
                                        ;2410   ;       SUBTST 3 - SYNC2C--INTERVAL REGISTER IS CLOCKED WITH SINGLE CLOCK BIT
                                        ;2411   ;       SUBTST 4 - SYNC2D--INTERRUPT ENABLE BIT GETS LOADED
                                        ;2412   ;                 SYNC2E--INTERRUPT ENABLE BIT GETS READ ON THE ID BUS
                                        ;2413   ;       SUBTST 5 - SYNC31--RUN BIT SETS IN THE CONTROL AND STATUS REGISTER
                                        ;2414   ;                 SYNC32--INTERVAL REGISTER CLOCKS THE FIRST TIME
                                        ;2415   ;                 SYNC33--INTERVAL REGISTER CLOCKS THE SECOND TIME

; TEST  164     INTERRUPT REQUEST COMPARATOR
;
; TEST DESCRIPTION
;       THIS TEST CHECKS THE INTERRUPT REQUEST COMPARATOR BY RUNNING A
;       COUNT PATTERN THRU THE IPL FOR EACH OF THE FIRST 16 LEVELS OF
;       IPL ACTIVE AND USES THE INTERRUPT BRANCH TO DETECT WHETHER
;       THE INTERRUPT REQUEST SIGNAL IS ACTIVE.
;
;       SUBTST 1 - RUN A COUNT PATTERN THRU THE IPL FOR EACH OF 16 LEVELS
;                  OF IPL ACTIVE.
;                  FOLLOWING IS A TABLE THAT SHOWS THE EXPECTED BRANCH
;                  CONDITION FOR EACH VALUE OF THE IPL AND IPL ACTIVE BITS:
;
;       IPL ACTIVE                IPL                BRANCH BIT 0
;       ----------                ---                ------------
;
;          0                      0-F                        FALSE
;          1                      0                          TRUE
;                                 1-F                        FALSE
;          2                      0-1                        TRUE
;                                 2-F                        FALSE
;          3                      0-2                        TRUE
;                                 3-F                        FALSE
